Executive Summary
Baseline Conditions
Economic Disruption Scenarios
Fiscal Impacts of COVID-19 Job Losses
Appendix
GOALS OF STUDY

HR&A was engaged by the Nassau County IDA and Suffolk County IDA to:

Develop a dynamic approach to measure the real-time economic impact of COVID-19 on the regional economy in terms of both depth & distribution

Understand the specific geographies, populations, and business sectors that have been disproportionately impacted by the COVID crisis, and how this might in turn impact local governments

Use these findings to inform local decision-making, requests for resources, and near- and long-term resilience planning
COVID-19 ECONOMIC IMPACT | EXECUTIVE SUMMARY

KEY FINDINGS

• The unprecedented nature of the crisis is rewriting the fundamental patterns of local economies in real-time, requiring new and dynamic approaches to measuring impact

• Long Island has been particularly hard hit by the dual health + economic crises, shedding jobs at a faster rate compared to NYC and surrounding suburbs during early months of the crisis

• Net job losses to-date total 220K and may reach as high as 375K in 2020, reducing local earnings by as much as $21B and local economic activity by $61B

• As a multi-year economic crisis, earnings and spending losses may be even greater in 2021 owing to prolonged recovery within some sectors coupled with expiring unemployment benefits

• COVID-related job and earnings losses will have a tremendous impact on sales tax revenues, the primary source of revenue for both counties. These impacts will be felt in 2020, 2021, and beyond

• Job losses are concentrated among low-paying jobs, workers with low levels of education, and Hispanic/Latino workers on Long Island. Existing economic disparities, including disparate access to credit, opportunity and mobility, and affordable housing may make it more difficult for these populations to recover

• County governments are working to leverage state and federal resources to support business operations, restore consumer confidence, and assist hard-hit sectors, but additional Federal resources are crucial to the region’s recovery
We are facing a dual crisis—an unprecedented global health emergency coupled with the fastest rise in unemployment on record.

Source: New York State Department of Labor, Suffolk and Nassau County Departments of Health
The unprecedented nature of the COVID crisis is rewriting the fundamental patterns of local economies in real-time, requiring new approaches to projecting impact. Our analysis therefore:

- Draws upon a variety of data sources to project the initial economic shock from COVID-19 by sector, including documented monthly job losses from the U.S. Bureau of Labor Statistics and weekly initial Unemployment Insurance claims from the New York State Department of Labor.
- Expands upon precedent impact studies and methodologies and consults other economic forecasts to identify differential rates of recovery.
- Considers the perspectives of local industry groups and civic organizations to project “new normal” levels of economic activity.

Total economic and fiscal impacts reflect the combined industry effects across the three phases of economic shock, recovery, and stabilization.
COVID-19 ECONOMIC IMPACT | EXECUTIVE SUMMARY

SHOCK + RECOVERY

ECONOMIC SHOCK

How deep is the initial impact of business shutdowns and reductions in consumer demand?

RATE OF RECOVERY

When will businesses reopen and how well-positioned are they to resume full operations?

NEW NORMAL

What share of pre-COVID jobs will be recovered at stabilization?
Long Island businesses shed jobs at a faster rate compared to NYC, its northern suburbs, New York State, and the U.S. as a whole during the initial months of the crisis.

Source: U.S. Bureau of Labor Statistics
COVID-19 ECONOMIC IMPACT | EXECUTIVE SUMMARY

SHOCK

TOTAL JOB LOSSES FROM COVID-19 ON LONG ISLAND PROJECTED AT TROUGH ABSENT SIGNIFICANT POLICY INTERVENTION

270,000
TOTAL INITIAL COVID-RELATED JOB LOSSES ON LONG ISLAND (FEB - APR 2020, NON-SEASONALLY ADJUSTED)

145,000 – 175,000*
POTENTIAL ADDITIONAL JOB LOSSES OWING TO ONGOING EFFECTS OF THE ECONOMIC SLOWDOWN (MAY 2020-ONWARD)

• Long Island businesses shed 270K jobs during the first 2 months of the crisis. Businesses recouped 48K jobs in May, as some economic activity curtailed during the pandemic resumed

• Continued supply chain disruptions and reductions in consumer demand are expected to result in an additional job losses beyond those recorded to-date. Total job losses in 2020 are expected to reach 375K relative to pre-COVID levels

• The regional economy is expected to continue showing net job losses through 2021, though the pace of job loss will be moderate as segments of the economy begin to recover

* Reflects total gross job losses through the end of the economic shock period. As some sectors are expected to resume growth faster than others, total net job loss relative to pre-COVID levels are likely to be less than the 415K-445K at any point in time as new jobs will have been added.
COVID-19 ECONOMIC IMPACT | EXECUTIVE SUMMARY

SHOCK

TOTAL PROJECTED JOB LOSSES ON LONG ISLAND BY INDUSTRY, FEB 2020 THRU TROUGH
(NON-SEASONALLY ADJUSTED)

- >90% of initial job losses were in sectors directly impacted by the health crisis
- 2/3 of total projected job losses within directly impacted sectors occurred during the first 2 months of the crisis, when economic activity was severely curtailed by COVID and efforts to contain it
- A majority of follow-on job losses, or those in sectors primarily impacted through the effects of economic slowdown, are expected to occur after the initial shock period

Projected job losses are heavily concentrated among low-paying professions.

The region’s lowest-paying sector—Hospitality—experienced the greatest decline during initial months of the crisis, with employment down two-thirds.

Hispanic + Latino workers make up a disproportionate share of Hospitality workers on Long Island (27% vs. 17% of all workers), indicating disparate impacts felt among minority populations.

68% of all job losses are in sectors paying less than the regional average annual wage of $61,600.
Job losses on Long Island are heavily concentrated among workers without a post-secondary education and those earning less than $35,000 per year.

In addition to bearing a disproportionate share of job losses, lower-income households and communities of color may suffer from slower recovery rates owing to pre-existing inequities like limited credit access, lower mobility and access to opportunity, and lack of affordable housing.
Though the region appears prosperous in aggregate, a macro view masks underlying inequities that can compound the challenges of COVID-related job losses. Wealthier communities with better credit access tend to recover faster from disasters such as Superstorm Sandy. Areas of concentrated poverty + restricted capital access should be considered as part of place-based approaches to COVID recovery.

TOTAL ANNUAL ECONOMIC IMPACT OF COVID-19 ON LONG ISLAND (2020)

- 375K NET JOB LOSSES ON LONG ISLAND (VS. PRE-COVID LEVELS)
- $21 BILLION EARNINGS LOSSES AMONG LONG ISLAND WORKERS
- $61 BILLION REDUCED ECONOMIC ACTIVITY ON LONG ISLAND
Recovery will occur in waves, with the starting point (trough) and duration differing by industry depending on public policy interventions, industry adaptivity, firm-worker dynamics, and business size.

SURVEY FINDINGS

Business Recovery:

- 62% of Nassau County businesses expect to recover in 2021; 10% expect to recover in 5+ years (Hofstra)
- 6 of 10 higher education institutions on Long Island expect to recover in 5 years (LIRACHE)
- 34% of real estate firms on Long Island expect to recover in 2021; 29% expect to recover in 2-5 years (ABLI LIBI Real Estate Survey)

Business Closure:

- 8% of small businesses (<25 employees) in Nassau County may close this year, compared to 3% of businesses with more than 25 employees. (Hofstra)
- 50% of businesses in Suffolk County have closed temporarily; 1% of businesses have closed permanently (BRU Survey)
- 12% of real estate firms report that 21%-50% of tenants are closing down their business (ABLI LIBI Real Estate Survey)
- One-third of industrial businesses on Long Island are at risk of closing (HIA-LI)
COVID-19 ECONOMIC IMPACT | EXECUTIVE SUMMARY

ROADMAP TO RECOVERY

TIMELINE OF RECENT EVENTS + COUNTY ACTIONS

Mar 1
First New York case of COVID-19 confirmed

Mar 7
Gov. Cuomo declares State of Emergency

Mar 16
Schools closed statewide

Mar 22
New York State on PAUSE takes effect

Apr 3
100K confirmed cases of COVID-19 in New York

May 14
5 regions enter Phase 1 reopening

May 22
$100M NY Forward Loan fund launched

May 26
Boost Nassau recovery program announced

May 27
Long Island authorized for Phase 1 reopening

May 28
Suffolk County EDC launches small business loan fund

June 10
Phase 2 reopening

June 24
Phase 3 reopening

• Offering stabilization loans to small businesses, M/WBEs, and non-profits that did not receive federal stimulus funds

• Addressing PPE supply needs through procurement protocols and free PPE for certain small businesses, non-profits, and M/WBEs

• Surveying local businesses to understand needs and inform approaches to recovery

• Convening a Coronavirus Economic Advisory Council and Fiscal Impact Task Force

• Creating a virtual “one stop shop” for reopening resources and employment assistance

• Leveraging open space, streets, and temporarily vacant structures to expand access to outdoor programming, dining, and entertainment to restore consumer confidence
COVID-19 ECONOMIC IMPACT | EXECUTIVE SUMMARY

ROADMAP TO RECOVERY

Additional financial resources are needed to advance the Long Island region’s recovery, including budgetary relief for local governments as well as additional support for people, businesses, and places, to include:

**Financial**

- **Federal funding** as outlined in the HEROES Act passed by the House, which included $375B in budgetary relief for local governments to help avoid cuts to public services, layoffs, and/or tax increases, all of which could further negatively impact the local economy.

- **Extension of benefits** for workers and businesses given the on-going impacts of the pandemic and the likelihood of multi-year impacts.

- **Federal infrastructure funds** to address long-term impacts to the built environment, spur job creation, and transform the region to become more resilient in the face of future cataclysmic events and economic shocks.

- Continued federal relief programs to support small businesses, encourage new businesses, and recover heavily impacted industries.

- Assistance to states and counties for workforce development, job retraining, and equity initiatives in disproportionately affected communities and populations.
Other interventions to advance this recovery framework include:

**Regulatory**

• Streamlining local approvals and permitting processes to **ensure ‘shovel ready’ construction work** is in the pipeline.

• **Developing policy changes and revitalization strategies** that target heavily impacted industries (e.g. Hospitality, Healthcare, Retail, and Construction) and commercial corridors (e.g. village downtowns and Main Streets).

**Programmatic**

• **Investing in training and reskilling for workers disproportionately impacted** by the crisis, many of whom will be limited in their ability to find alternative job opportunities given a mismatch between existing skills and those needed to access jobs in sectors quickest to recover.

• Partnering with local businesses and institutions to develop **on-the-job training programs**.

The total population of Long Island is in decline owing primarily to domestic out-migration. A limited stock of affordable housing further contributes to brain drain throughout the region, with the share of young adult and adult populations declining since 2000.

ECONOMIC DISRUPTION | CONTEXT

TIMELINE OF RECENT EVENTS
As the focus of government action shifts from emergency health response to stabilizing the economy, County leaders must be equipped with a sound understanding of how the economic fallout from COVID-19 is playing out in local communities to make informed decisions about investments and policies related to recovery.
GOALS OF STUDY

This work is guided by two related sets of questions which are critical to informing local decision-making and resource allocation in the aftermath of a disaster or crisis:

1. How, specifically, has this disaster impacted our local economy? What are the geographies, populations, and business sectors that have been disproportionately impacted, and how might this in turn impact regional and local governments?

2. How can local government, business leaders, and community stakeholders use these impact assessments to guide policymaking, recovery funding, and near- and long-term resilience planning?
ECONOMIC DISRUPTION | APPROACH

METHODOLOGY
HR&A drew upon a variety of sources to inform our approach to measuring the economic impact of COVID-19 on Long Island, including:

Data Sources:
- EMSI Staffing Patterns, Input-Output multipliers
- New York State Department of Labor (NYSDOL) Weekly Initial Unemployment Claims
- U.S. Census Bureau, American Community Survey

Surveys:
- Nassau County-Hofstra Business Survey
- Suffolk County Business Recovery Unit Survey
- LIRACHE Higher Education Survey
- ABLI LIBI Real Estate Survey
- HIA-LI Coronavirus Reopen Survey

All Data Sources for Long Island unless explicitly stated otherwise

Precedent Impact Reports & Methodologies:
- St. Louis Fed, UChicago Becker Friedman Institute (At-risk occupations)
- Delaware State Department of Labor (“Essential” businesses by industry code)
- Brookings Institute
- CBO 2005 Report on Possible Macroeconomic Effects of an Influenza Pandemic
- GDP Macroeconomic Forecasts (RSQE, Wells Fargo, IHS Markit)
- NBER Working Paper: Pandemic Recession: L or V-Shaped?
- NYMTC: 250 Socioeconomic + Demographic Models Enhancements
HR&A’s approach considers the **initial economic shock** from COVID-19, reflecting the impact of business shutdowns and reductions in consumer demand; differential **rates of recovery**, depending on when businesses are allowed to reopen and how well-positioned they are to resume full operations; and **“new normal”** levels of economic activity, which may be at, above, or below pre-COVID levels depending on economic sector.

**COVID-19 IMPACT**

Total reduction in employment relative to the baseline

- **ECONOMIC SHOCK**
  How deep is the initial impact?

- **RATE OF RECOVERY**
  When will recovery / resumed hirings begin?

- **NEW NORMAL**
  What share of jobs are recovered at stabilization?
**Stay-at-home** orders cause business closures or modification. Firms face several months of limited-to-no revenue. Some are unable to support expenses like payroll and rent. An initial group of businesses will close.

**Social distancing** requires ongoing modifications to business activity, even as stay-at-home orders are lifted. Businesses will see an indeterminate period of lower revenue, extending the period of uncertainty around ability to support expenses. More businesses will be forced to close.

**An uncertain future** defined by uneven recovery and instability in the face of potential recurrences. Firms must adapt to a new, post-COVID market equilibrium. New business formation may be stifled.
Economic Shock
ECONOMIC SHOCK | APPROACH

METHODOLOGY

Building from recorded job losses to-date, most of which are assumed to be a function of mandatory business closures, we project potential future job losses by sector through the end of the initial economic shock, or “trough.” To do so, we:

- Anchor job loss estimates to monthly employment statistics showing documented changes in employment by sector for the Nassau-Suffolk Metropolitan Division relative to pre-COVID levels (Feb 2020).

- Distinguish between job losses in industries directly impacted by the health crisis (direct impacts) versus those impacted primarily through the effects of the economic slowdown (secondary impacts).

- Apply economic multipliers to recorded job losses in directly impacted sectors to determine total follow-on job losses owing to reductions in demand.

*Direct impacts are only measured for the time that the local economy is on PAUSE. Once the stay-at-home order is lifted, all changes in directly impacted sectors are assumed to be a function of reductions in consumer demand. All impacts assume no significant future policy interventions.*
ECONOMIC SHOCK | APPROACH

OVER-THE-YEAR INCREASE IN WEEKLY INITIAL UNEMPLOYMENT CLAIMS BY SECTOR
TOTAL NEW YORK STATE, WEEKS ENDING 3/21 THRU 5/16

Total job losses reflect the dual impacts of the public health crisis and subsequent changes in consumer demand.

Early spikes in UI claims are largely a function of mandatory business closures within sectors directly impacted by the health crisis.

**Secondary effects** are typified by an uptick weeks following the Stay at Home Order, followed by flatter, sustained trends in initial UI claims.

Source: New York State Department of Labor
**Economic Shock | Known COVID-19 Impact**

### Percentage Change in Total Non-Farm Employment
(Feb - Apr 2020, Seasonally Adjusted)

Long Island businesses shed jobs at a faster rate (22%) compared to all other metro regions in New York State during the initial months of the crisis.

More than 90% of recorded job losses between during the first two months of the crisis were in sectors directly impacted by the health crisis.

~270,000 TOTAL JOB LOSSES ON LONG ISLAND, FEB-APR 2020*

* Sectoral job losses based on non-seasonally adjusted figures. Seasonally adjusted job losses through Apr 2020 equal 296K.

**ECONOMIC SHOCK | KNOWN COVID IMPACT**

**FOLLOW-ON JOB LOSSES BY INDUSTRY**
**APR – MAY 2020, NON-SEASONALLY ADJUSTED**

Total employment on Long Island **increased by 48K**
between Apr-May 2020, as economic activity curtailed in Mar & Apr due to the crisis began to resume. In contrast to earlier months, sectors experiencing month-to-month declines were **overwhelmingly those impacted primarily through the effects of the economic slowdown**, accounting for **60%** of total employment losses.

TOTAL JOB LOSSES FROM COVID-19 ON LONG ISLAND
PROJECTED AT TROUGH ABSENT SIGNIFICANT POLICY INTERVENTION

270,000
TOTAL INITIAL COVID-RELATED JOB LOSSES ON LONG ISLAND (FEB - APR 2020, NON-SEASONALLY ADJUSTED)

145,000 – 175,000*
POTENTIAL ADDITIONAL JOB LOSSES Owing TO ONGOING EFFECTS OF THE ECONOMIC SLOWDOWN (MAY 2020-ONWARD)

* Reflects total gross job losses through the end of the economic shock period. As some sectors are expected to resume growth faster than others, total net job loss relative to pre-COVID levels are likely to be less than the 415K-445K at any point in time as new jobs will have been added.

During the first two months of the crisis, businesses on Long Island shed 270K jobs. Businesses recouped 48K jobs in May 2020, as some economic activity that was substantially curtailed during the initial months of the pandemic resumed.

Continued supply chain disruptions and lasting reductions in consumer demand could result in additional jobs lost beyond those recorded to-date. Total job loss relative to pre-COVID levels is projected to reach 375K through the end of 2020. Net job losses may continue through 2021, though at a moderate pace as more segments of the economy begin to recover.

ECONOMIC SHOCK | TOTAL IMPACT BY SECTOR

TOTAL PROJECTED JOB LOSSES ON LONG ISLAND BY INDUSTRY, FEB 2020 THRU TROUGH

- INITIAL JOB LOSSES (FEB - APR 2020)
- FOLLOW-ON JOB LOSSES (MAY 2020 – TROUGH)

Sectors directly impacted by the health crisis saw **two-thirds of total projected job losses occur during the first two months of the crisis.** A majority of follow-on job losses, or those in sectors primarily impacted through the effects of economic slowdown, are expected to occur **after the initial shock period.**

* Sectoral job losses based off non-seasonally adjusted figures. Future job losses by sector cover all classes of workers, including self-employed and extended proprietors. Figures shown above represent the midpoint of the projected range.

Job losses are heavily concentrated among low-earning professions, particularly those in the Hospitality sector.

More than 2/3 of total Hospitality jobs on Long Island were lost between Feb-Apr 2020. The sector is also the region’s lowest-paying, with median annual earnings of less than $25K.

By examining the characteristics of workers within impacted occupations or industries, we can understand who is most likely to suffer economic losses (possibly in conjunction with poor health outcomes). Hispanic + Latino workers, for example, make up a disproportionate share of workers in the hardest hit sector (27% of Hospitality workers vs. 17% of all workers Long Island).

If economic losses were equally shared, the percentages within any given category to the left should be similar to the percentage for all local workers. Differences suggest areas for policy focus.

Job losses are heavily concentrated among workers without a post-secondary education and those earning less than $35,000 per year. That a disproportionate share of jobs shed had offered workers some form of on-the-job training further suggests that retraining or reskilling initiatives need to be central to future recovery efforts on Long Island.

Source: NYS DOL WARN Notices as of 5/27/20
Long Island appears economically prosperous when viewed in aggregate, suggesting a potential heightened ability to weather sudden/severe disruptions in income relative to surrounding counties with lower baseline income.
ECONOMIC SHOCK | IMPACTS BY LOCATION

However, a macro view masks underlying inequities that can compound the challenges of COVID-related job losses. A 2017 study by the New York Fed identified 18 ZIP Codes on Long Island that rank among the lowest in the nation along a variety of credit inclusion, credit capacity, and debt management indicators, areas that track closely with concentrations of lower-income households. The Fed concluded that wealthier communities with better credit access recover faster from disasters such as Superstorm Sandy relative to less prosperous communities. Areas of concentrated poverty and/or restricted capital access should be considered as part of place-based approaches to recovery.

Source: U.S. Census Bureau; Federal Reserve Bank of New York, Long Island Credit Profile, 2017.
TOTAL ANNUAL LONG ISLAND EMPLOYMENT

Job loss and (eventual) recovery rates will vary by sector. Some sectors may start to resume growth even as others remain in decline. The total job loss relative to pre-COVID levels will reflect the net effects of recession and recovery within different segments of the regional economy. The net annual employment projections below take into account differential recession durations and rates of recovery by sector.*

* See Rate of Recovery and New Normal sections of report for underlying assumptions.
ANNUAL NET JOB LOSSES + ECONOMIC IMPACT

Long Island could see a total net loss of 375K jobs through the end of 2020 relative to pre-COVID employment levels. As the economy begins to recover in 2021, the total delta is expected to drop to 275K jobs. Job losses are in turn associated with reduced earnings and reduced spending by businesses and households in the local economy.

** Unadjusted earnings loss refers to total potential earnings impact, not adjusted for earnings that could be recovered through state or federal unemployment benefits. The total spending loss shown above correlates with the unadjusted earnings loss figure and similarly does not account for any adjustments in spending potential that could be recovered through unemployment benefits.
**ECONOMIC RECOVERY | OVERVIEW**

**Economic Shock** ends at the point in which net job gains begin to occur.

**Recovery** will occur in waves, with the starting point (the trough) and duration differing by industry depending on public policy interventions, industry adaptivity, firm-worker dynamics, and business size.

**New Normal** will be established at the end of the recovery period as growth stabilizes. It is defined as the share of pre-COVID-19 employment at the time of stabilization.
RATE OF RECOVERY FACTOR: PUBLIC POLICY

REGIONAL RECOVERY PLANNING
The Governor has established a phased business reopening plan that prioritizes sectors with the lowest risk of workplace or customer infection spread and those with the greatest economic impact.

PHASE 1 REOPENING
Construction, Manufacturing, Wholesale Trade, Curbside Retail

PHASE 2 REOPENING
Professional Services, Finance + Insurance, Retail, Admin + Support, Real Estate

PHASE 3 REOPENING
Restaurants + Food, Hotels + Accommodations

PHASE 4 REOPENING
Arts, Entertainment, Recreation, Education

OTHER EXTERNAL / MACRO FACTORS

• Potential for subsequent rounds of stimulus funding for workers, businesses, and localities*

• Clear guidelines for health and safety accompanying business reopenings

• Availability of appropriate protective equipment and testing kits

• Development and availability of vaccine

*Analysis does not assume subsequent rounds of stimulus funding.
Source: New York State Governor’s Office
RATE OF RECOVERY FACTOR: INDUSTRY ADAPTIVITY

The timing and phasing of resumed growth will be both a function of when businesses are allowed to re-open and how well-positioned they are to resume full operations. For sectors directly impacted by the public health crisis, greater clarity around what businesses should be doing to ensure the safety of workers and customers is needed before large-scale rebounds can occur.

**FIRST WAVE**

Sectors primarily impacted by the effects of the economic slowdown (vs. those directly impacted by the public health crisis) are best-situated for recovery. Many have maintained operations during the stay-at-home order owing to a heightened ability to work remotely, and thus are more adaptive in the face of future uncertainties.

**SECOND WAVE**

Social distancing requires ongoing modifications to business activity, even as stay-at-home orders are lifted. Businesses directly impacted by the health crisis may see an indeterminate period of lower revenue, extending uncertainties around ability to support expenses such as payroll and rent. More businesses will be forced to close, even as others begin to recover.

**THIRD WAVE**

Sectors which are indefinitely impacted by the public health crisis such as Hospitality and Leisure are unlikely to recover until an effective treatment or vaccine becomes widely available.

</table>
ECONOMIC RECOVERY | RESUMED GROWTH

RATE OF RECOVERY FACTOR: BUSINESS SIZE

As seen with other recent economic downturns, growth rates are likely to differ by business size, with the largest firms quickest to recover and the smallest among the last to do so. This is particularly pertinent for Long Island, where 79% of all businesses employ fewer than 10 workers.

DIFFERENTIAL RATES OF RECOVERY FOLLOWING 2007 RECESSION

</tbody>
</table>

DISPARATE IMPACTS ON SMALL BUSINESSES

Half of small businesses have just 1-2 months of cash on hand, less than the duration of the crisis to-date, a crisis which shows few signs of abating. Minority- and women-owned small businesses, which under normal circumstances already face reduced rates of business formation, revenues, and access to financing, are particularly vulnerable owing to their concentration within at-risk industries such as retail and hospitality. Without significant and extended intervention, these businesses are unlikely to reopen, and those that do will enter an even more challenging business environment.

Source: County Business Patterns; Quarterly Workforce Indicators (2017); NYMTC; NBER, Brookings Metropolitan Policy Program
HOW LONG WILL THE RECESSION LAST?

Economic recessions begin at the peak of the business cycle and end at the trough. The overall duration will be a function of how long it takes to hit bottom and subsequently, when businesses begin to (re)hire.

PROJECTED RECESSION DURATION BY INDUSTRY GROUP

HYPOTHETICAL / NOT DRAWN TO SCALE

Q3 2020
6-mo. recession

Q1 2021
12-mo. recession

Q4 2021
24-mo. recession

First Wave

Second Wave
Retail; Construction; Education; Health Care + Social Assistance; Admin, + Support; Real Estate; Wholesale Trade; Manufacturing; Other Services

Third Wave
Leisure; Hospitality; Transportation

11.1 MONTHS
Average recession duration, peak to trough (1945-2009)
Source: NBER
ECONOMIC RECOVERY | RATE OF RECOVERY

WHAT WILL RECOVERY LOOK LIKE?

The rate at which sectors add jobs coming out of the trough will determine the arc of recovery. Rapid recoveries take a “V” shape whereas prolonged recoveries such as those anticipated for Leisure + Hospitality are “L”-shaped.

OVERALL RECESSION DURATION + SHAPE OF RECOVERY
HYPOTHETICAL / NOT DRAWN TO SCALE

Q1 2021
“V”-shaped recovery

Q2 2022
“U”-shaped recovery

Q4 2023
“L”-shaped recovery
NEW NORMAL | PERSPECTIVES

WHAT WILL BE THE NEW NORMAL?

It depends who you ask.

Permanent Layoffs:
- **20%** of current layoffs are permanent (BLS)
- **42%** of layoffs, including furloughs, will be permanent (UChicago)
- **40-50%** of unemployed workers have no expectation of being recalled to their previous job (Oxford University Survey)

Business Closure:
- **31%** of small businesses have a *50%+ chance of bankruptcy* in the next 6 mo. (Yale, Princeton, Oxford Survey)
- **52%** of small businesses expect to be *out of business* in 6 mo. (Society of Human Resource Management Survey)
- The avg. business has more than $10K in monthly expenses and <1 mo. of cash on-hand (NBER)
- After a major natural disaster, **40-60%** of businesses never reopen (FEMA)

Labor Force:
- Up to **1/4** of jobs won't come back (Joseph Brusuelas, RSM)
- **8M** people will exit the labor force through Q3 2020 (Philip Swagel, CBO)
NEW NORMAL | PERSPECTIVES

WHAT WILL BE THE NEW NORMAL ON LONG ISLAND?

Here’s what we’ve heard.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Industry Insights

- March and April are the busiest months for the Long Island construction industry in a typical year. Much of this activity has been lost with the freeze on non-essential construction.
- Long Island relies heavily on tourism and hospitality revenues generated during the summer months, which the Suffolk Budget Dept projects will be down 50% relative to 2019. Many businesses have shifted their focus to new reservations and rebookings for the 2021 season.
NEW NORMAL | BUSINESS RECOVERY

WHAT WILL BE THE NEW NORMAL ON LONG ISLAND?

There are far too many unknowns to be able to project employment over the long-term with any degree of certainty.

While short-term impacts are already evident, many government agencies, including the U.S. Bureau of Labor Statistics, the New York State Department of Labor, and New York City Department of City Planning, do not plan to adapt long-term forecasting methods in response to COVID; the public health crisis is considered a cyclical rather than a structural disruption to the economy and thus long-term trends should remain relatively unchanged.

Since our analysis is focused on the nearer-term, our impact scenario assigns differential rates of employment recovery to sectors based on where each might be relative to pre-COVID employment once the third wave of recovery has reached stabilization (assumed Q4 2023). Over time, beyond the scope of our analysis, sectors may fully catch up to pre-COVID levels.

| **Third Wave**  | • Accommodation + food services  
• Transportation + warehousing  
• Arts, entertainment, recreation | Q4 2021 | 24 months (Q4 2023) | 75% |
Business closures and job losses owing to COVID-19 will lead to reductions in earnings and spending potential, which will in turn impact local tax revenues.
Potential fiscal impacts were estimated using the historical average ratio of employee earnings on Long Island to County tax revenues. While the relationship between earnings and tax revenues may vary by tax type, we assume that, on average, a reduction in earnings will proportionally decrease tax payments across local tax types, with the exception of property taxes; the impact to property taxes will depend on the timing of assessments.

* In addition to the total earnings loss, our fiscal impact analysis also considered an adjusted total earnings loss based on an estimate of the share of earnings that could potentially be recovered through state and federal unemployment benefits. The adjusted impact number reflects an adjustment for earnings losses that incorporate the use of available state and federal unemployment benefits. This analysis does not assume continuation of unemployment benefits under the CARES Act beyond that already in effect and set to expire in July 2020.
FISCAL IMPACT OF JOB LOSSES | ANNUAL IMPACT

TOTAL ANNUAL ECONOMIC IMPACT OF COVID-19 ON LONG ISLAND (2020)

375K
NET JOB LOSSES ON LONG ISLAND (VS. PRE-COVID LEVELS)

$21 BILLION
EARNINGS LOSSES AMONG LONG ISLAND WORKERS

$61 BILLION
REDUCED ECONOMIC ACTIVITY ON LONG ISLAND
ESTIMATED FISCAL IMPACT OF JOB LOSSES ON COUNTY REVENUES

COVID-related job losses have had a devastating impact on sales & use tax collections due to reduced earnings and spending. The below chart outlines HR&A’s estimates of the impact for FY 2020 and FY 2021 based solely on this reduced spending. The range of the estimated revenue loss is dependent on the extent and duration of federal and state unemployment benefits and the related impact on consumer spending. Forgone local tax revenues could grow further in FY 2021 as unemployment benefits expire.

The figures below do not include property tax impacts.

ESTIMATED IMPACT OF JOB LOSSES ON COUNTY REVENUES: METHODOLOGY

HR&A’s revenue impact estimates differ from figures released by Nassau & Suffolk Counties and should be considered a subset of each County’s total projected loss in sales & use taxes and other revenues. Among other differences, County figures are based on actual revenues collected as well as anticipated changes in consumer behavior, while HR&A’s estimates consider only those impacts associated with jobs/earnings losses owing to the economic shutdown and follow-on changes in consumer demand. HR&A’s analysis also excludes property taxes.

Mar 7  Gov. Cuomo declares State of Emergency
Mar 16 Schools closed statewide
Mar 22 New York State on PAUSE takes effect
Apr 3  100K confirmed cases of COVID-19 in New York
May 14 5 regions enter Phase I reopening
May 22  $100M NY Forward Loan fund launched
May 26 Boost Nassau recovery program announced
May 27 Long Island authorized for Phase I reopening
May 28 Suffolk County EDC launches small business loan fund
June 10 Phase 2 reopening
June 24 Phase 3 reopening

- Offering stabilization loans to small businesses, M/WBEs, and non-profits that did not receive federal stimulus funds
- Addressing PPE supply needs through procurement protocols and free PPE for certain small businesses, non-profits, and M/WBEs
- Surveying local businesses to understand needs and inform approaches to recovery
- Convening a Coronavirus Economic Advisory Council and Fiscal Impact Task Force
- Creating a virtual “one stop shop” for reopening resources and employment assistance
- Leveraging open space, streets, and temporarily vacant structures to expand access to outdoor programming, dining, and entertainment to restore consumer confidence
Additional financial resources are needed to advance the Long Island region’s recovery, including **budgetary relief for local governments** as well as additional support for **people, businesses, and places**, to include:

### Financial

- **Federal funding** as outlined in the HEROES Act passed by the House, which included $375B in **budgetary relief for local governments** to help avoid cuts to public services, layoffs, and/or tax increases, all of which could further negatively impact the local economy.

- **Extension of benefits** for workers and businesses given the on-going impacts of the pandemic and the likelihood of **multi-year impacts**.

- **Federal infrastructure funds** to address long-term impacts to the built environment, spur job creation, and transform the region to become more resilient in the face of future cataclysmic events and economic shocks.

- Continued federal relief programs to support **small businesses, encourage new businesses**, and recover **heavily impacted industries**.

- Assistance to states and counties for **workforce development, job retraining**, and **equity initiatives** in disproportionately affected communities and populations.
Other interventions to advance this recovery framework include:

**Regulatory**

- Streamlining local approvals and permitting processes to ensure ‘shovel ready’ construction work is in the pipeline.
- Developing policy changes and revitalization strategies that target heavily impacted industries (e.g. Hospitality, Healthcare, Retail, and Construction) and commercial corridors (e.g. village downtowns and Main Streets).

**Programmatic**

- Investing in training and reskilling for workers disproportionately impacted by the crisis, many of whom will be limited in their ability to find alternative job opportunities given a mismatch between existing skills and those needed to access jobs in sectors quickest to recover.
- Partnering with local businesses and institutions to develop on-the-job training programs.
OUTREACH | PERSPECTIVES

METHODOLOGY

HR&A had conversations with business and industry leaders on Long Island to gather qualitative insights, which were used to contextualize our analysis. Anecdotal findings from our discussions are included in the subsequent pages.

Stakeholders:

• Terri Alessi-Miceli, Hauppauge Industrial Association of Long Island
• John Durso, Long Island Federation of Labor, Local 338
• Dolores Freidrich, Hofstra University
• Dennis Grossman, Nassau Council of Chambers of Commerce, DMI Group Inc.
• Catherine Hennessy, Hofstra University
• Kristen Jarnagin, Discover Long Island
• Kevin Law, Long Island Association
• Lawrence Levy, Hofstra University
• Mitchell Pally, Long Island Builders Institute
• Stuart Rabinowitz, Hofstra University
• Luis Vazquez, Long Island Hispanic Chamber of Commerce
OUTREACH | QUALITATIVE INSIGHTS

ECONOMIC SHOCK

Stakeholders noted that many Long Island businesses rely on seasonal or cyclical consumer demand, which makes them especially vulnerable to disasters and economic shocks that bring about abrupt changes in consumer behavior.

- For many small businesses across all industries, the 8-week loan period for PPP is too short relative to the duration of economic shock. For a substantial number of businesses in the retail, accommodations and food, and construction industries, the statewide restrictions on permitted business activity has prevented PPP utilization as business operations have paused completely.

- The temporary closure of “non-essential” businesses and changes in consumer spending as a result of COVID-19 has disrupted the seasonality of business activity on Long Island.

- Given the unprecedented nature of the COVID-19 crisis, business owners on Long Island expressed concerns about ongoing public health impacts, consumer confidence, access to supply chains, and potential permanent damages that premature reopening could bring if accompanied by a new wave of infections.
OUTREACH | QUALITATIVE INSIGHTS

RATE OF RECOVERY

Stakeholders believe that the rate of recovery will depend on regaining consumer confidence and the extent of federal, state, and local support.

- Recovery will partially depend on the rate at which consumer confidence is restored. Businesses in all industries have expressed the need for continued federal, state, and local assistance during the recovery process as consumer demand is expected to return gradually.

- Financial aid and support programs need to be extended over a longer time period to ensure that businesses can recover quickly.

- County governments should invest in industry- and place-specific business and workforce development programs that can accelerate the rate of recovery through supporting disproportionately impacted workers.
NEW NORMAL

While the new normal for most industries is still nebulous, stakeholders speculate that COVID-19 will prompt shifts in business operations, consumer markets, and commuter trends.

• While many businesses will continue to occupy traditional brick-and-mortar stores post-COVID-19, social distancing has accelerated the adoption of online business services, which may to lead to some downsizing of leased space.

• Industries may expand to new consumer markets. For example, with the current restrictions on international travel, the tourism and hospitality industry is shifting their marketing strategy to capture more local and regional visitors in the upcoming summer season. Across all industries, the ability to capture new potential customers may improve the new normal.

• COVID-19 may reshape commuter trends on Long Island and the greater region. A potential decline in office demand, increased telecommuting, and more flexible work hours may prompt changes in how Long Islanders live and work. Associated shifts in LIRR ridership and commute duration may occur.

• New downtown revitalization initiatives, mixed-use infill development, TOD, and workforce development programs may mitigate permanent job and businesses losses.
FISCAL IMPACT OF JOB LOSSES | OVERVIEW

APPROACH

We find ourselves in a moment that lacks parallel in modern history. Projections of the severity and duration of impact change on a near-daily basis, with even the most advanced forecasting models unable to accurately predict what lies ahead. As the health crisis and the federal stimulus response to it continue to evolve rapidly, government and civic leadership must be prepared with real-time data to allow local decisionmakers to deploy finite local resources in a strategic manner and to support requests for federal and state aid where there are severe shortfalls.

The Nassau and Suffolk County Budget Departments have each prepared their own high-level estimates of how local coffers may be impacted over the coming years, relying on national economic data and recent sales tax collections. Nassau County reviewed economic projections and financial reports and applied percentage reductions to different tax categories by fiscal quarter. Suffolk County consulted national forecasts to project future declines in GDP, and applied ratios to estimate tax losses.

The goal of HR&A’s analysis is to understand the impact on local businesses and workers. We’ve therefore adopted a bottom-up approach to estimating fiscal impact based on projected jobs and earnings losses among Long Island businesses and their employees. In so doing, we are able to adjust for the availability of partial or full earnings offsets provided through federal and state unemployment insurance programs. This approach allows us to pinpoint the severity of impact at different points in time by taking into account the expiration or exhaustion of unemployment insurance benefits during the out-years. HR&A’s fiscal impact estimates are different from projections undertaken by the Counties since they do not capture the full extent of impact from temporary business closures, reductions in consumer spending or service fee collections due to the stay-at-home order, and other long-term changes in consumer behavior beyond those which are reasonably expected to result in direct or indirect jobs and earnings losses. HR&A’s estimated impacts should therefore be considered a subset of each County’s total projected losses.

In summation: The hit to County tax revenues is likely to be even worse next year than this year. This is not a 2020 or a 2021 problem, but one likely to extend across multiple fiscal years.
FISCAL IMPACT OF JOB LOSSES | OVERVIEW

APPROACH

HR&A’s fiscal impact analysis focuses on the impacts that COVID-related job losses on Long Island and resulting earnings losses could have on local revenues. Our methodology is tailored to assess the impact of current and projected local economic conditions. Our analysis is based on projected jobs and earnings losses specific to Long Island.

- While we anticipate that job losses will be a key driver of fiscal impact, other factors will influence the total fiscal impact of COVID-19. Our analysis reflects the impacts of reduced consumer spending and reduced visitation to the extent that these trends are reflected in associated jobs and earnings losses, which we largely assume to be the case. However, a limitation of this methodology is that our analysis likely does not capture the full extent of impacts related to near-term consumer spending behavior and temporary business closures that did not result in direct or indirect job losses. In this way, HR&A’s estimated impacts should therefore be considered a subset of each County’s total projected losses.

- Earnings losses reflect those associated with businesses located on Long Island. This does not include the full impact of reduced spending among newly unemployed Long Island residents who previously worked outside of Long Island, beyond the impact that reduced resident spending would factor into job losses in Long Island businesses.

- Our fiscal impact model evaluates the historical ratio of earnings and local revenues, as defined by the NYS Comptroller. The local revenues considered include real property taxes and assessments, other real property tax items, sales and use taxes, other non-property taxes, charges for services, charges to other governments, use and sale of property, and other local revenues. The analysis excludes state aid, federal aid, proceeds of debt, and other non-local sources of revenues.

- The baseline of our model evaluates jobs and earnings losses relative to pre-COVID levels of employment (Feb 2020). Since our benchmark is relative to pre-COVID employment, it does not measure impacts against projected growth in tax revenues.
FISCAL IMPACT OF JOB LOSSES | ANNUAL IMPACT

FISCAL IMPACT – PROPERTY TAX

In addition, Long Island can expect impacts to property tax revenues. COVID-related job losses may result in part from permanent business closures, which in turn drives increased commercial vacancy rates. Loss of income and spending capacity may further result in greater residential property tax delinquency and pressures to reduce local budgets.

We anticipate that impacts to property taxes will be limited in FY 2020, since impacts to property taxes are influenced by regulatory factors, such as the complexity of assessment procedures and the timing of assessments. While we do not expect the impact to be realized in the immediate-term, impacts to property tax collections are likely to occur in future years. We estimate that impacts to property taxes in future years could range up to $100M for each county.
